

ROAMSYS RMS - Your Roaming Management Solution

Simplify your roaming management, get more out of your roaming agreements and increase the efficiency in your team. That's ROAMSYS RMS, the central source to access all roaming related data and documents as well as to organize and plan your roaming relations.

ROAMSYS RMS is a comprehensive and easy-to-use web solution to efficiently manage your roaming business. The heart of the system is a centralized database that can be securely and easily accessed by your whole roaming team, even if it is located in different locations. You can assign individual read and write permissions to an unlimited number of users and manage an arbitrary amount of own and partner documents. ROAMSYS RMS also includes an intelligent reporting technology that automatically informs you about changes in the documents received from your roaming partners. In addition you get regular free updates of the system to ensure compliancy with the latest GSMA RAEX standards (AA.14 and IR.21) at any time.

ROAMSYS RMS at a Glance
