

Rollout Manager - Boost your Roaming Footprint and Revenues

Improve the efficiency of new service implementations, accurately plan and monitor whole launch projects and receive reports on your current live agreements. It's all quite easy using the Rollout Manager, our sophisticated workflow management solution.

You want to optimize the implementation process of new roaming services, you plan to go live sooner and get first revenues earlier? You also need reports on all live or in-test agreements of a specific roaming service at the click of a button? The Rollout Manager is the perfect solution for you. It supports all steps from first contact with the roaming partner until going live of the service and gives you full transparency on the latest implementation and connection status. During the whole launch, relevant co-workers will be automatically informed on the progress and possible problems.
